

**WE ARE**  
 **COLOSSAL**

**DEVELOPING A HOLISTIC SECURITY PLAN**

# HOLISTIC SECURITY

Your company's sensitive data and information systems face a wide range of cybersecurity threats. If your data and assets are compromised, the damage to your business can be catastrophic, sometimes compromising the information of thousands or millions, and costing your company a fortune. To combat this, your enterprise needs a holistic security approach.

# THIS GUIDE WILL COVER THE ESSENTIALS OF SECURITY BEST PRACTICES FOR YOUR COMPANY:

**DISASTER RECOVERY**

**ENDPOINT &  
NETWORK SECURITY**

**PHYSICAL &  
INTEGRATED SECURITY**

**COMPLIANCE**

# DISASTER RECOVERY

## DISASTER RECOVERY

Your company should develop disaster recovery plans that reliably protect your mission-critical assets, from scheduled cloud-based backups to failover plans that can keep productivity up in the most unforeseen circumstances. Partnerships with secure storage and backup providers like Commvault and HPE would allow you to implement top-of-the-line solutions that keep your data and assets protected 24/7.

# ENDPOINT AND NETWORK SECURITY

## ENDPOINT AND NETWORK SECURITY

Your company will need to monitor and protect your network at every endpoint. Solutions like Cisco ISE and Umbrella, for example, allow you to secure the network with identity-based permissions and full visibility into network activity.

# PHYSICAL AND INTEGRATED SECURITY

## PHYSICAL AND ENDPOINT SECURITY

As your company virtualizes, modernizes and updates its solutions, you will need to infuse security into your work every step of the way. From networking to wireless, collaboration and more, you will need to ensure your solutions are secure with leading solutions from Microsoft, Cisco and others.

Your company will need to make sure the platforms it works with provide a vigilant cyber presence that is not only currently secure, but also collects and logs data to prevent future attacks. Once potential threats are identified, the platforms should have the ability to repair any damage created by the attack in real time.

You'll need to address continuously evolving threats with robust security options. Your company should also consider investing in electronic physical security solutions, like Cisco Meraki's intelligent, network-attached security cameras that can report suspicious activity in real time.

# COMPLIANCE

## COMPLIANCE

Your company should develop its networks, software and applications with compliance in mind. Whether you're working under HIPAA, HSPD-12, GDPR or other standards, you will need to develop permissions, restrictions and custom configurations that help you and your employees uphold those regulations.

# COLOSSAL CONTRACTING

Colossal Contracting is a CVE-certified Service Disabled Veteran Owned Small Business (SDVOSB).

Colossal has nearly a decade of experience building solutions for government and military clients. This background in high-security work makes security top-of-mind in every engagement, whether our client is commercial, federal or military.

Combined with our vendor partnerships and close monitoring of the industry, we consistently offer cutting-edge solutions. Our highly skilled and top-certified engineers apply those solutions to best fit your environment and needs, and our managed services allow us to keep your IT running optimally over time.

*We bring our deep understanding of rigid compliance and tight security to every engagement, be it military, federal or commercial.*
